Work Experience

Founding Engineer, Grepr – San Francisco, CA

Jan 2025 – Present

- Owned the design, implementation, and rollout of a Kubernetes operator replacing a 500 ms server-side polling control plane; migrated every production Flink pipeline, rolled the operator across five environments, supported 1,300+ reconfigurations in 60 days without a failed reconfiguration, and retired the legacy reconciler.
- Refactored a multi-tenant impact-estimation platform processing 90K+ imported monitors, dashboards, and log metrics; deduplicated 53K estimation records into 5.1K Flink batch computations, reducing required batch work by 10x and vendor API fan-out by 2x.
- Led two customer POCs through telemetry-sink migration, pipeline deployment, and reduction tuning; both became paying production customers and now sustain 90–93% log-volume reduction across 14B+ monthly events.
- Designed an extensible attribute-aggregation framework for Grepr's Flink log reducer, shipping backend configuration and UI while increasing global-reducer throughput by 40%.

Software Engineer, Gilead Sciences – Bay Area, CA

May 2021 – Dec 2024

- Progressed from summer intern to 20 hours/week through senior year, then full-time after graduation; built the department's first Grafana/Prometheus platform for AWS and PostgreSQL systems.
- Automated 10+ ingestion pipelines that consolidated scientific and operational data into trusted master-data products used by downstream analytics and applications.

Projects

workout

workout.michaelsparre.com

- Built and deployed a multi-user Hevy training platform with webhook-driven sync, progress analytics, and a scoped MCP server for AI-assisted workout analysis and safe routine updates.

observe

observe.michaelsparre.com

- Built and deployed a self-hosted personal-finance platform with Plaid, SnapTrade, React, FastAPI, and PostgreSQL, plus portfolio and budget analytics, MCP access, and production observability.

Skills

Languages: Java, Python, SQL, TypeScript, Bash

Infrastructure: Kubernetes, AWS, Docker, Terraform, Helm, CI/CD, Prometheus, Grafana

Systems & Tools: Apache Flink, Kafka, PostgreSQL, Iceberg, React, LLM tool calling, MCP, RAG

Education

University of California, Berkeley

May 2022

B.S. in Electrical Engineering and Computer Sciences
